

How to Set Lock Screen / Wallpaper

1. Open image

Click on the red button to open the full-sized image.

2. Download

Hold your finger on the image for a few moments, then select "Save Image".

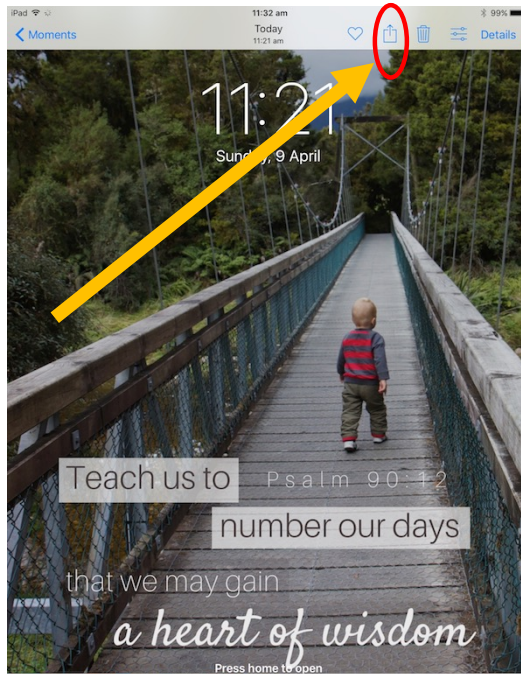

3. View saved photo

Go to your own Photos library and you'll see the image saved there.

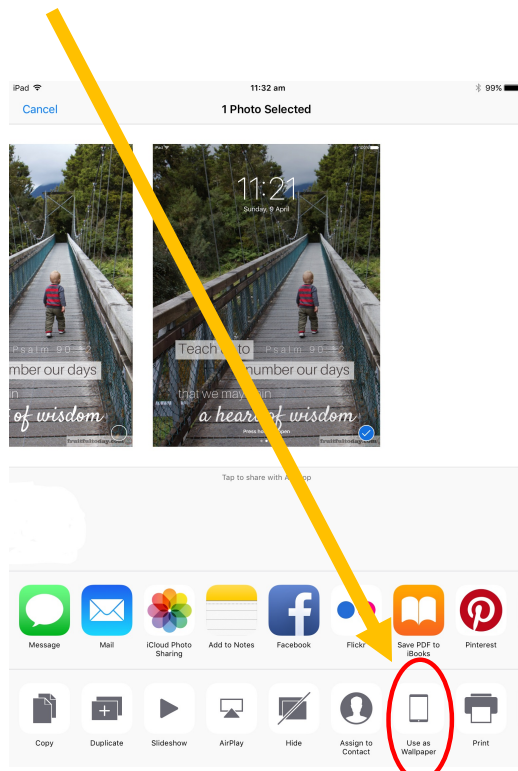

4. Export it

Once you've clicked on the saved photo (in your library), export it using the same button you use to share your personal photos via email / Facebook. On my iPad it's just to the right of the heart icon.

5. Choose the "Use as Wallpaper" option

6. Select “Lock Screen”

Once you’re done, your lock screen will look something like this!

May God richly bless you through these images.

- Kristy ☺
